Adolescent Idiopathic Scoliosis Monograph Series American ...

Adolescent idiopathic scoliosis has no clear causal agent, and is generally believed to be multifactorial. [21] [24] The prevalence of scoliosis is 1% to 2% among adolescents, but the likelihood of progression among adolescents with a Cobb angle less than 20° is about 10% to 20%.

Adolescent Idiopathic Scoliosis Monograph Series

Adolescent idiopathic scoliosis is the most common form of scoliosis. If the curve is small when first diagnosed, it can be observed and followed with routine X-rays and measurements. If the curve or Cobb angle stays below about 20-25 degrees (Cobb method or angle, is a measurement of the degree of curvature), no other treatment is needed.
