In this introductory course, we will discuss theory of linear block codes and convolutional codes, their encoding and decoding techniques as well as their applications in real world scenarios. Starting from simple repetition codes, we will discuss among other codes: Hamming codes, Reed Muller codes, low density parity check codes, and turbo codes.

There are so many codes included in this book, and I am not interested in 'knowing' every code in the world, so for me the real world application is more important then I can choose a certain code to learn if I have limited time. Otherwise it looks to me only a collection of codes but not too much inspiration and insight.
